Revenue of Vinod Store

Distribution of Revenue on Products

Introduction

- Overview about the issues faced by Vinod Store
- Data Analysis
- Outcomes, Data understanding
- Recommendations to Vinod Store.

Data Sources

Data is collected from multiple sources, including sales records, customer information, inventory lists, and customer surveys and reviews.

Data Cleaning

Data cleaning involves removing duplicates, missing values, correcting inconsistencies, and outliers.

Data Transformation

Data is transformed and organized into a suitable format for format for analysis, using techniques like data aggregation aggregation and feature engineering.

SOURCE OF DATA

Source	Description
Sales Records	Detailed records of every transaction, including including date, time, products purchased, and and customer information.
Uncollected Debt	Information about customers, including purchase purchase history, credit history , paid and unpaid unpaid credits at end of month.
Inventory Lists	Records of all products in stock, including quantities, quantities, unit prices, supplier information, and and expiration dates.

Data Cleaning Methods

A photograph of a handwritten ledger or notebook page. The page is filled with multiple columns of numerical data, some of which are crossed out or corrected, illustrating the need for data cleaning. The paper is aged and slightly torn at the edges.

1

Handling Missing Values

Missing values are addressed using imputation techniques, replacing missing data with plausible values.

2

Outlier Treatment

Outliers are identified and handled using methods to ensure data accuracy and prevent skewed analysis.

3

Data Standardization

Data is standardized to a consistent format, using techniques like data normalization and feature scaling.
